

International Conference

May 30 - June 3, 2016

University of Perpignan Via Domitia, France

EMERGING TRENDS IN APPLIED MATHEMATICS AND MECHANICS

Optimal Control and Design with Applications

Organized by

Dan Tiba

Institute of Mathematics of the Romanian Academy of Sciences, Bucarest, Romania

and

Cornel Murea

Université de Haute Alsace, Mulhouse, France

This mini-symposium is devoted to recent advances in the theory of optimal control and in shape optimization. New efficient methods and algorithms will be discussed together with relevant applications in various areas of interests.

Free boundary problems and the fictitious domain approach will be other topics of interest due to their intimate relationship to the general subject of the session.
